ABOUT'
THE HospicaRx

Product Background

HospicaRx Hospital Information Management System (HIMS) is a comprehensive healthcare management solution developed to meet the evolving needs of hospitals, nursing homes, multi-specialty clinics, and healthcare institutions. Designed with valuable insights from healthcare professionals and hospital administrators, HospicaRx helps streamline clinical, administrative, financial, and operational processes through a single integrated platform.

Built on years of healthcare domain expertise, HospicaRx continuously evolves to incorporate industry best practices, regulatory requirements, and modern healthcare technologies, ensuring efficient patient care and seamless hospital operations.

HospicaRx™
"Efficient Care, Seamless Management."
Hospital Management Software

Development Approach

HospicaRx follows a user-friendly, activity-based workflow designed around the day-to-day operations of healthcare facilities. The system minimizes manual effort and eliminates duplicate data entry by ensuring that information entered once is automatically available across relevant departments and modules.

The software is designed to simplify operations for hospital staff by automating routine calculations, billing processes, patient records management, inventory tracking, and administrative tasks. Staff members only need to record patient services, treatments, and activities, while the system intelligently manages billing, receipts, financial transactions, and operational workflows.

Authorized personnel can modify system parameters whenever required, ensuring flexibility without compromising data integrity. This approach enables healthcare organizations to access real-time information and make informed decisions quickly.

Examples of real-time information available through HospicaRx include:

- OPD and IPD patient statistics
- Daily revenue and collection reports
- Doctor-wise patient analysis
- Bed occupancy status
- Billing and outstanding receivables
- Pharmacy and inventory tracking
- Department-wise performance reports
- Financial and operational dashboards

Development Environment

HospicaRx has been developed using the latest Microsoft .NET Core framework, providing a secure, scalable, and high-performance platform for modern healthcare institutions. The application architecture ensures maximum reliability, flexibility, and compatibility with current healthcare technologies and enterprise systems.

Built with a modern web-based architecture, HospicaRx supports seamless deployment across hospitals, clinics, nursing homes, and multi-location healthcare organizations. The platform enables centralized data management, faster processing, enhanced security, and easy integration with third-party healthcare applications.

Technology Stack

- Framework: Microsoft .NET Core
- Architecture: Multi-tier Web-Based Application
- Frontend: HTML5, CSS3, JavaScript, Bootstrap, jQuery
- Backend: ASP.NET Core
- Database Support: Microsoft SQL Server
- API Integration: RESTful APIs & Healthcare Integrations
- Deployment: Cloud-Based & On-Premise
- Security: Role-Based Access Control, Data Encryption & Audit Trails

Key Features of HospicaRx

- Easy and user-friendly operations
- Modern .NET Core based web application
- Multi-user environment for all departments
- Low operational and maintenance costs
- Automated billing and charge calculations
- No expert billing knowledge required for operators
- Automatic calculation based on patient category, doctor, ward , bed, panel, and services
- One-time setup of billing and operational parameters
- Real-time access to hospital information and reports
- Comprehensive security and access control
- Role-based user permissions and authority management
- Reliable, scalable, and future-ready architecture

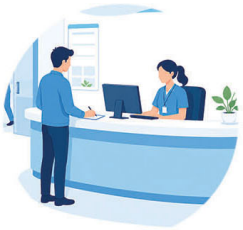

PATIENT WORKFLOW

HospicaRx Overview

HospicaRx follows a centralized patient registration system where all patients are registered at the reception before availing hospital services. Based on the patient's requirement, the system generates:

- Patient Registration Card
- Charge Slips for Services
- Payment Receipts
- Consolidated Patient Bills

The system can be accessed across multiple departments, including Nursing Stations, Laboratories, Radiology, Pharmacy, Stores, and Diagnostic Units, ensuring seamless information sharing and real-time billing.

Patient Registration

A centralized patient database stores demographic details, medical information, allergies, photographs, and contact details.

Patients can be registered for:

- Emergency
- OPD (Outpatient)
- IPD (Inpatient)
- Laboratory & Diagnostic Services

Key Features

- Centralized Patient Records
- Registration Card Generation
- Receipt & Charge Slip Printing
- Patient Label Printing
- Service Billing & Payments
- Quick Patient Search

Emergency & Day Care

- Manages emergency and day care
- admissions with complete tracking of
- patient details, ward/bed allocation,
- doctor referrals, and billing.

Key Features

- Emergency Registration
- Automatic Billing & Charge Calculation
- Receipt & Charge Slip Generation

OPD Management

- Manage outpatient registrations,
- consultations, appointments, billing,
- and receipts.

Key Features

- OPD Card Generation
- Appointment Management
- Auto Billing & Receipts
- Patient Visit Tracking
- Quick Patient Search

IPD Management

- Admission & Bed Management
- Doctor Visit Tracking
- Advance & Final Billing
- Discharge Summary
- Patient History Management
- Quick Patient Search
